

How can we give natural areas the place they deserve in our cities?

Cities' natural ecosystems, including green and water areas, provide incredible resources for improving people's quality of life, both physically and emotionally.

Green infrastructure

They provide spaces for recreation and sports, mitigate the effects of climate change, reduce environmental pollution, and preserve biodiversity, among other benefits.

Reduce pollution

Climate change

Biodiversity

Environmental assets can promote the temporary use of free spaces such as parks or urban gardens, the reuse of gray or rainwater for green area irrigation, or generate incentives for installing green infrastructure.

Municipal nurseries

Irrigation

Urban gardens

Green façades

Public spaces can promote a healthy lifestyle that is environmentally friendly and resilient to the effects of climate change.

Are you interested in learning how to incorporate environmental assets in public spaces? Our guide offers information on environmental assets in public spaces and guidance on urban waste management and circular economy.
