

What is the first thing that comes to mind when you think about **public spaces**?

Public spaces are strategic elements for the proper functioning of cities and fulfill essential functions.

Social

Cultural

Environmental

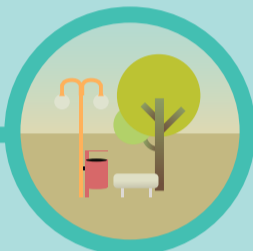

Economic

Streets

Squares

Parks

What defines quality public spaces?

Public spaces can be understood as nodes and connectors within a continuous grid of streets, squares, or parks over the entire city that provide access to city services.

A well-organized network of public spaces promotes sustainable mobility, improves the city's environmental conditions, protects and fosters biodiversity.

Security

Comfort

Biodiversity

Distribution

Number

Scale

Quality

Where do we start?

As a starting point, it is crucial to rely on an accurate diagnosis of public spaces in the city. These spaces should be assessed based on the number, distribution, dimensions, design, and quality of their urban components.

Public spaces should be safe and comfortable for everyone.

Are you ready to join this new way of understanding and creating public spaces together in our region's cities?
